**D**esigned by REDZINE and Studio 2b, Green Cube is a residential apartment in the Highlands neighbourhood in Denver, Colorado. This contemporary, energy efficient home has strong architectural forms, a beautiful glass staircase, recyclable 3D wall panels at the left and a wonderful living

wall feature that divides the living and dining areas. The apartment is designed to make a positive, sustained impact on homeowners and the environment. It is a three-storey construction with attached garage and roof-top deck. The upper floor houses the bedrooms with a roof-top patio.

### Green Glory

Green indoors can be seen with foliage placed in the middle of the house, near the staircase. This not only improves the quality of air indoors, but also adds a touch of freshness and beauty. Each room is a wide expanse of space, which is used very effectively. The dining

Foliage placed in the middle of the home serves as a partition between the staircase and kitchen area.

THE CONTEMPORARY ENERGY EFFICIENT APARTMENT IS DESIGNED TO HAVE A POSITIVE IMPACT ON THE HOME OWNERS.

View of the staircase from the kitchen, leading to the home office and other rooms on the floors above.

The dining table works as a functional unit which doubles up as a billiard table too.

White lends classy and elegant touch to the master bathroom.

The rooftop patio with the spectacular and breathtaking view of Downtown Denver.

table is a functional unit which doubles up as a billiards table. The kitchen area is one large open unit with white shelves and drawers and brown wooden cupboards that serve as a beautiful contrast. Minimum yet effective lighting can be seen on the ceiling with small round natural lights.

The home office is done up completely in white colour which gives a very classy and elegant look to the viewer. This room has a 3D

recyclable wall which adds to the simplicity of the area. Each section of the house has some element of green and can be seen in the home office as well.

The eco-friendly design elements in the house include granite counter tops, radiated heat floors and swamp coolers instead of an air-conditioning unit – both of which help improve the indoor air quality, furniture and art: Zo studio, Mod Mood Retro Consignment and other local artists.

### Colour Coordinated

The two bedrooms in the house are designed using completely different concepts. One room has grey coloured walls that have a rustic feel. Contrasting upholstery in the room complements the décor. This area is dominated by brown shades, but a hint of blue and red gives life to the room. A large wall hanging is placed on one side of the room and can be seen in the master bedroom as well.

The kitchen area is a large open unit with white shelves, drawers and brown wooden cupboards that make for a beautiful contrast.

The master bedroom in brown and white shades provides a sophisticated and striking effect.

WALL FLATS, FROM INHABIT, ARE LIGHTWEIGHT DIMENSIONAL WALL TILES, WHICH ARE USED FOR THE SECOND FLOOR LOFT OFFICE.

The master bedroom is much brighter as compared to the other bedroom. Here, white and brown are the main colours used. The combination of brown and white in the upholstery and other décor provides a striking and royal effect.

#### Tile Check

The upstairs small home office has accent walls created out of Wall Flats that are made with 100 per cent bamboo pulp. Panels can be recycled.

For the second floor loft office, Wall Flats from Inhabit were used.

These are lightweight dimensional wall tiles that work together through an automatic pattern repeat to create large-scale dimensional walls of any size and shape. Wall Flats work in multiples to create a continuous, uninterrupted sculptural wall. The wall panels are molded

from bagasse, one of the world's most renewable resources. They are a durable, biodegradable and environmental friendly product. They can be installed, trimmed and painted with commonly available products and tools. Scraps are biodegradable and

can be recycled with other paper products or composted. Wall Flats nest inside each other to create low volume cartons and easily ship with common small parcel carriers.

#### Out in the Air

The roof-top patio has a spectacular and breathtaking view of downtown Denver. This area has a seating arrangement for four people and one can enjoy their early morning tea, have breakfast or dine in the open under the stars. The exterior of the home also has a lot of green shrubs and plants all along the borders. The structure of the house from the outside is also very unique.

With stylish interiors and exceptional outdoor, Green Cube is an apt example for modern yet sustainable homes.
